

# INGENICIEL ROADMAP

FIRST ISSUED ON JULY, 30TH 2017

LAST MODIFICATION ON OCTOBER, 25TH 2017

This document is the Ingeniciel project roadmap. It is a living document and is expected to change any time. Objectives and dates should be considered aspirational.

## Q4 2017

The current year is dedicated to project launch, based on concept development and website building. Our roadmap for Q4 2017 will follow these steps : being present on main social networks (Twitter, Facebook...) in order to ensure Ingeniciel launch. The end of 2017 is dedicated to society funding, through a crowdsale based on an ICO (Initial Coin Offering), by releasing INGCL tokens (Ingeniciel company cryptocurrency). Two airdrops (tokens bounties) were organized during November. A large amount of these tokens will be given to healthcare centers.

## **Q2-Q3 2018**

Funding phase finalization, society incorporation and beginning the contracts setup with healthcare centers. Consensus conferences with healthcare professionals, healthcare centers and patients associations. INGCL cryptocurrency will be available on popular marketplaces (Bittrex, Poloniex, Yobit, HitBTC...) and on Coinmarketcap.

## **Q1 2019**

Beginning of Ingeniciel platform development (software kernel, API, wallet, UX/UI design) and its underlying blockchain.

## **Q3 2019**

Alpha version release, in order to deploy application in preview in healthcare centers. Physicians and their patients may, at this time, discover and test the platform. Marketing, advertising and communication enhancement around Ingeniciel.

## **Q1 2020**

Beta version release, and stable version setup. Patients and healthcare professionals will be able to download application on their smartphone. Initiation and demonstrations will be organized in healthcare centres, and also in faculties (medicine, nursery, dentistry, pharmacy...).

## **Q2 2020**

The aim at this point is to deploy Ingeniciel in most of french healthcare centers : dedicated servers installation, inter-centers communication protocol establishment. A documentation and support will be available. Patients will be able to use the application daily.

## **Q1 2021**

Ingeniciel's aim for 2021 and 2022 is to deploy the solution through Europe, but also in other countries which want to use the application in their healthcare centers. We also want to develop Artificial Intelligence in medical diagnoses resolution.
